

Home Cabinets

Craig Allen Designs has established a reputation for creating beautiful and functional custom cabinet designs that are the focal point of kitchens and bathrooms. While people often seek out our design services when they're constructing or remodeling their kitchen or bath, we want you to know that we can create custom home cabinets for any room in your residence, allowing you to express your style anywhere.

We'll help you explore the many design options that can be found in your home's rooms beyond the kitchen and bath — from the living room to the bedroom or the mudroom, and anywhere in between.

Living Room Cabinets

Living rooms are made for living! Make yours the envy of friends and family with a custom cabinet design from Craig Allen that adds flair and functionality. Fireplace mantels and surrounds, a comfortable zone for reading with shelves or built-in bookcases, or an entertainment center to keep clutter under control, all are possibilities using custom cabinetry. And the only limitation is your imagination.

Bar Cabinetry

A custom created bar that fits your space precisely can add to both your own and your guests' enjoyment when entertaining. Or appreciating a solitary quiet evening at home.

When you get a custom designed bar, it can be anything you want. Do you have a need to store 10, 20 or even 30 bottles of wine at a time? Custom cabinetry will match your request. You can display barware or hang wine glasses. You can hide bottles in cabinets or display them prominently. Under cabinet refrigerator units can come in handy. And a small utility sink is always an option.

Home Offices

If you run your own business or work remotely from home, you can take care of business your way with an office designed using custom cabinetry.

Our home cabinet design services will create an office that's conducive to getting your work done, using home office cabinet solutions that let you customize any space to fit your office equipment, work technique and design style.

We can create filing cabinets that look good and work hard so that all your important paperwork is at your fingertips. If you purchase supplies in bulk, you can store them in cabinets rather than leaving them in unsightly piles that occupy floor space in your office. We can even build a desk to meet your personal needs; it can be a stand-alone desk or a built-in desk within a run of cabinets. Or we can create cabinets and bookcases to complement a desk you already own.

Function and convenience can be designed into our office cabinets, thanks to features such as easy-access file rollout trays. They

keep everything organized and accessible. Here we designed the cabinet to fit an office printer and its supplies, so they can be stored out of sight but always available.

And don't forget to request a charging station to ensure all your electronics are fully charged and ready-to-go when you are. Today's built-in options include chargers that can be installed in a drawer, keeping wires and charging devices out of sight.

Bedrooms

If there is anywhere that storage is at a premium, it's in the bedroom, usually a problem in townhomes, condominiums and houses that don't have a garage or basement. Adding custom home cabinets in a bedroom is a great way to add storage space while creating a whole new look.

Clothes, extra linens and seasonal comforters are just a few of the things you may want to stow in cabinets in a bedroom. And for families with children, there's never enough storage for their toys. Solve that storage problem with cabinets designed to accommodate whatever they have.

This little girl's bedroom was designed around an existing window. We used built-in open shelves for toy storage and a functional and cozy bench seat for reading and day-dreaming.

Notice how the shelves are flush with the wall; this feature definitely says "custom".

Laundry Rooms, Mudrooms, Garages and Basements

Cabinets are a definite must-have in laundry rooms, and there's no reason your laundry room shouldn't be as good looking as the rest of your home.

Craig Allen Designs will create a functional laundry room with plenty of storage and built-in cabinets to keep your laundry items in one place and add value to your home. You may choose wall cabinets, possibly with lift-up doors. You can add a floor-to-ceiling tall cabinet to keep brooms, mops, an ironing board and other cleaning items out of view. You can hide a hamper or two in cabinets by installing roll-out hampers that slide into your cabinet. Or you can have a pull-out drawer custom built to take care of any storage requirement.

Laundry room cabinets can keep bottles of soap, fabric softener, household cleaners and other supplies out of sight and, most importantly, out of the reach of children.

Attractive cabinets are an especially appealing option if your laundry room is part of a mudroom that is used as an entrance to your home. Even if entry to your home isn't through the laundry room, a mud room is a great way to corral coats, boots, sports equipment, back packs, keys, briefcases and anything else your family brings in with them.

Having a mudroom -- large or small -- makes sure your family is ready to leave the house in the morning. Hooks, cubbies, cabinets and drawers are great options for kids (and adults) to easily hang and stow away backpacks, shoes and coats. Then they are ready and waiting to get everyone out of the house in the morning rush.

And don't forget to include a bench seat. You'll definitely need a place to sit down to put on shoes and boots, plus the under-seat storage will come in handy.

If you love your pets but not all the leashes, food containers and treats that can overwhelm your home, the mudroom can bring order to that chaos. Hooks are nice for hanging leashes and collars, and deep drawers can keep pet toys, extra dry food and pet shampoos out of the way. Plus you can use the mudroom as a place for wiping dirty paws before Fido goes inside.

If you use your garage and/or basement for storage, you can keep things organized with custom cabinets. Even if you're active in your garage and basement every day, installing custom home cabinets in these areas is still a wise investment for many homeowners.

Hutches

A hutch is a serious furniture piece when it's designed and built for your space alone using custom cabinetry. It can be used most anywhere in the house.

A hutch is composed of two pieces: the bottom section is closed base cabinets, or a cabinet with drawers, or a combination. The top piece can be open shelves, or glass front cabinets with interior lighting to showcase collectibles. Crown moldings and decorative toe options further create a furniture look.

However you assemble the pieces, you'll get a beautiful and functional heirloom furniture piece with timeless appeal.
